

Azure Auto Scale Template 1.1 Release Notes

Revision Date: September 23, 2020

Azure Auto Scale Template 1.1 introduces two new options for your VM-Series firewall on Azure auto scaling deployment.

- **Application Insight Resource Region**—in the inbound and hub templates, you can now specify the region for your Application Insight Resource. A new drop-down has been added to the template that allows you to specify the region. See [Parameters in the Auto Scaling Templates for Azure](#) for more information.
- **Hardware-Based VM-Series Model PAYG License**—beginning with PAN-OS 9.1.3, a PAYG license applies a VM-Series capacity license based on the hardware allocated to the instance. the PAYG instance checks the amount of hardware resources available to the instance and applies the largest VM-Series firewall capacity license allowed for the resources available. See [VM-Series Firewall Licenses for Public Clouds](#) for more information.

Additionally, PAN-OS 9.1.3 is now the selectable VM-Series image under the vmSeriesImageVersion parameter.

For more information about using the VM-Series firewall on Azure Auto Scale Template, see [Set up the VM-Series Firewall on Azure](#) in the VM-Series Deployment Guide.
